Memorandum

To Mr. Morton Mendel, General Superintendent Date February 8, 1974
From Paul G. Fulkerson, Superintendent - Filtration Plant
Subject Request for Hustler Mower for hillside mowing

COPIES TO:

The Indiana Department of Natural Resources inspection report of August 9, 1973 stated that the dikes at Hurshtown Reservoir must be mowed regularly. Mowing is required in order to destroy weed and clover growth and to give the finer grasses a chance to grow and form a thicker sod. In some areas the weed growth has already destroyed the grass cover and some erosion has occurred.

Our present Low Boy Tractor mowing equipment is unsuitable for this work. The tractor slides on the steep slopes and is very hazardous to the operator. The mower requested is specially designed for mowing on hillsides such as the earthen dikes at the Hurshtown Reservoir which have a 22 degree incline. The mower will also be utilized for mowing areas at the Cedarville Dam, St. Joe Dam and the Filtration Plant.

This unit has been demonstrated at Hurshtown Reservoir for Messrs. Bonar, Fulkerson and Mendel. Considerable effort and expense has already gone into hauling new dirt and seeding dikes due to erosion caused by weeds crowding out grasses. Although capital cost of this unit is high, it is the only piece of mowing equipment that includes a "levelling" gravity control system for slope or "Hillside" mowing. Efforts to ^{over-}

Solve this problem through other alternatives have failed, i.e. ground cover vegetation other than grasses (such as is used on highway slopes) is not satisfactory due to the fact that wildlife (rodent etc.) burrowing in the dikes cannot be detected (against state health regulations with respect to reservoir storage of water supply). No other mowing eqpt. could do the job - we must now these bloody slopes.
